

Proposed Roof Party Wall Line to Achieve Compartmentation

**Barnet
Homes**

- Tiles will only be stripped and set aside for reuse where firestopping is required, a full re-roof is not required.
- New A1 rated non-combustible mineral wool will be installed at the party wall line to fire stop between houses.
- New non-combustible A1 rated board (shown in green) will be used to fully compress the fire stopping and to create a fire break in the timber battens.
- Non-combustible firestopping will be installed within the void behind the fascia board to prevent spread of fire between houses (to note, some properties have open eaves).
- New A1 rated non-combustible mineral wool insulation will be installed and/or topped up in the loft spaces to reduce heat loss from the properties
